

Controlling your scope fan with the Seletek Armadillo

It's really easy and convenient to control your scope fan using the supplied cable and the Seletek Armadillo controller:

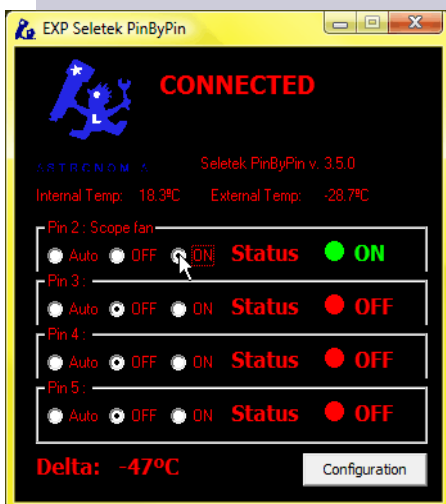

With the controller unpowered, hook the cable at both the Armadillo's EXP port and your scope fan plug.

If you have never done so before, launch "Pin by Pin EXP" from your start menu:

Then go to the configuration window and, to avoid mistakes, label Pin 2 as "Scope fan", then press OK.

You are done! Just selecting ON or OFF from the Pin By Pin main window you'll be able to switch the fan on and off from the comfort of your desk, maybe far away from the observatory.

There are many more uses for the Pin by Pin application, from automating this fan control depending on the temperature sensors' delta (internal / external), to power your dew heaters or control a green laser pointer. For more information please check our web site:
